

# Application of Mathematical Logic in Functional Program Verification

Nikolaj Popov and Tudor Jebelean

Research Institute for Symbolic Computation, Linz

`{popov, jebelean}@risc.uni-linz.ac.at`

# Outline

Functional Program Verification

Total Correctness

Building up Correct Programs

Coherent Programs. Recursion

Soundness and Completeness

Double (Multiple) Recursion Program Scheme. Termination

## Conclusion and Discussions

# Preconditions and Postconditions.

## Total Correctness

### Given the triple

$\{I\}F\{O\}$  (Input condition, Function definition, Output condition)

### Total Correctness Formula

$(\forall n : I[n]) (F[n] \downarrow \wedge O[n, F[n]])$

### Example

$\{x \in \mathbb{R} \wedge n \in \mathbb{N}\}$

$pow[x, n] = \text{If } n = 0 \text{ then } 1 \text{ else } x * pow[x, n - 1]$

$\{x^n = pow[x, n]\}$

$(\forall x : \mathbb{R})(\forall n : \mathbb{N}) (pow[x, n] \downarrow \wedge x^n = pow[x, n])$

# Preconditions and Postconditions.

## Total Correctness

### Given the triple

$\{I\}F\{O\}$  (Input condition, Function definition, Output condition)

### Total Correctness Formula

$(\forall n : I[n]) (F[n] \downarrow \wedge O[n, F[n]])$

### Example

$\{x \in \mathbb{R} \wedge n \in \mathbb{N}\}$

$pow[x, n] = \text{If } n = 0 \text{ then } 1 \text{ else } x * pow[x, n - 1]$

$\{x^n = pow[x, n]\}$

$(\forall x : \mathbb{R})(\forall n : \mathbb{N}) (pow[x, n] \downarrow \wedge x^n = pow[x, n])$

# Preconditions and Postconditions.

## Total Correctness

### Given the triple

$\{I\}F\{O\}$  (Input condition, Function definition, Output condition)

### Total Correctness Formula

$(\forall n : I[n]) (F[n] \downarrow \wedge O[n, F[n]])$

### Example

$\{x \in \mathbb{R} \wedge n \in \mathbb{N}\}$

$pow[x, n] = \text{If } n = 0 \text{ then } 1 \text{ else } x * pow[x, n - 1]$

$\{x^n = pow[x, n]\}$

$(\forall x : \mathbb{R})(\forall n : \mathbb{N}) (pow[x, n] \downarrow \wedge x^n = pow[x, n])$

# Building up Correct Programs

**Basic Functions e.g. +, -, \*, etc.**

**New Functions in Terms of Already Known Functions**

- ▶ Input and output predicates;
- ▶ Prove total correctness;

**Modularity. After proving correctness, use only the specification.**

$\{x \in \mathbb{R} \wedge n \in \mathbb{N}\}$  *Input condition*

$pow[x, n] = \dots$

$\{x^n = pow[x, n]\}$  *Output condition*

# Building up Correct Programs

## Appropriate values for the auxiliary functions

No input condition of an auxiliary function will be violated

### Example

$F[x] = \text{If } Q[x] \text{ then } H[x] \text{ else } G[x]$

$\text{Pre}[H[x]] \wedge Q[x] \Rightarrow F[x]$

$\text{Pre}[G[x]] \wedge \neg Q[x] \Rightarrow F[x]$

# Building up Correct Programs

Appropriate values for the auxiliary functions

No input condition of an auxiliary function will be violated

Example

$F[x] = \text{If } Q[x] \text{ then } H[x] \text{ else } G[x]$

$\Rightarrow (\forall x : \neg F[x]) \Rightarrow (\neg Q[x] \Rightarrow \neg H[x])$

$\Rightarrow (\forall x : \neg G[x]) \Rightarrow (\neg Q[x] \Rightarrow \neg F[x])$

# Building up Correct Programs

Appropriate values for the auxiliary functions

No input condition of an auxiliary function will be violated

## Example

$F[x] = \text{If } Q[x] \text{ then } H[x] \text{ else } G[x]$

- ▶  $(\forall x : I_F[x]) (Q[x] \Rightarrow I_H[x])$
- ▶  $(\forall x : I_F[x]) (\neg Q[x] \Rightarrow I_G[x])$

# Building up Correct Programs

Appropriate values for the auxiliary functions

No input condition of an auxiliary function will be violated

## Example

$F[x] = \text{If } Q[x] \text{ then } H[x] \text{ else } G[x]$

- ▶  $(\forall x : I_F[x]) (Q[x] \Rightarrow I_H[x])$
- ▶  $(\forall x : I_F[x]) (\neg Q[x] \Rightarrow I_G[x])$

# Building up Correct Programs

Appropriate values for the auxiliary functions

No input condition of an auxiliary function will be violated

## Example

$F[x] = \text{If } Q[x] \text{ then } H[x] \text{ else } G[x]$

- ▶  $(\forall x : I_F[x]) (Q[x] \Rightarrow I_H[x])$
- ▶  $(\forall x : I_F[x]) (\neg Q[x] \Rightarrow I_G[x])$

# Coherent Programs

## Simple Recursive Programs

$F[x] = \text{If } Q[x] \text{ then } S[x] \text{ else } C[x, F[R[x]]]$

### Conditions for coherency

- $(\forall x: \neg f[x]) (Q[x] \Rightarrow \neg s[x])$
- $(\forall x: f[x]) (Q[x] \Rightarrow \neg s[x])$
- $(\forall x: f[x]) (Q[x] \Rightarrow \neg c[x])$
- $(\forall x: f[x]) (Q[x] \wedge C[R[x]] \Rightarrow \neg c[x])$

# Coherent Programs

## Simple Recursive Programs

$F[x] = \text{If } Q[x] \text{ then } S[x] \text{ else } C[x, F[R[x]]]$

## Conditions for coherency

- ▶  $(\forall x : I_F[x]) (Q[x] \Rightarrow I_S[x])$
- ▶  $(\forall x : I_F[x]) (\neg Q[x] \Rightarrow I_F[R[x]])$
- ▶  $(\forall x : I_F[x]) (\neg Q[x] \Rightarrow I_R[x])$
- ▶  $(\forall x, y : I_F[x]) (\neg Q[x] \wedge O_F[R[x], y] \Rightarrow I_C[x, y])$

# Coherent Programs

## Simple Recursive Programs

$F[x] = \text{If } Q[x] \text{ then } S[x] \text{ else } C[x, F[R[x]]]$

## Conditions for coherency

- ▶  $(\forall x : I_F[x]) (Q[x] \Rightarrow I_S[x])$
- ▶  $(\forall x : I_F[x]) (\neg Q[x] \Rightarrow I_F[R[x]])$
- ▶  $(\forall x : I_F[x]) (\neg Q[x] \Rightarrow I_R[x])$

Functional Program Verification

Total Correctness

Building up Correct Programs

Coherent Programs. Recursion

Soundness and Completeness

Double (Multiple) Recursion Program Scheme. Termination

## Conclusion and Discussions

# Conclusions and Discussion

- ▶ The problem of proving program correctness is translated into a problem of proving first order formulae;
- ▶ Prove by hand;
- ▶ Prove by an automatic theorem prover.
